

Bolidays Control

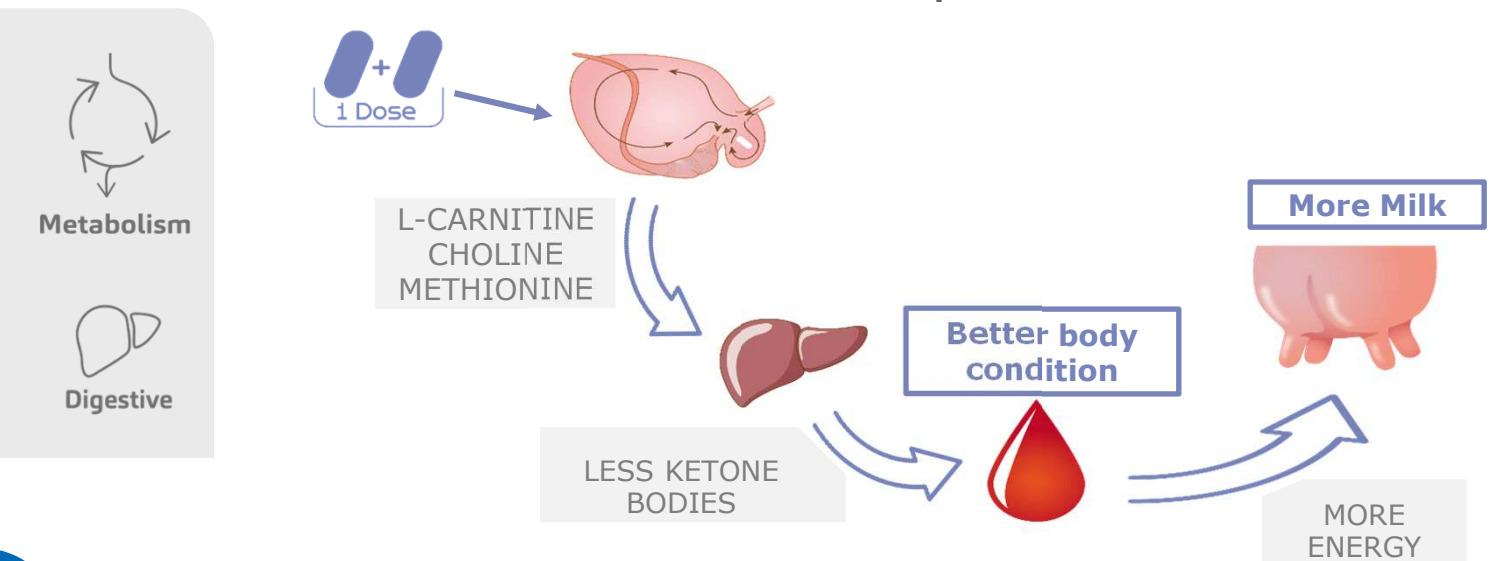

**Optimize the beginning
of lactation by
preventing nutritional
imbalance**

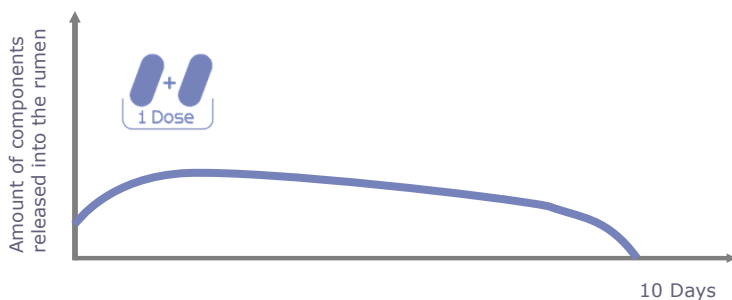

Bolidays Control

WHAT ?

Bolidays Control provides **liver and energy metabolic ingredients** such as L-carnitine, **rumen-protected choline and methionine** at the beginning of lactation in order to **stimulate liver detoxification** and **limit production of ketone bodies**

HOW ?

1 dose of Bolidays Control
(2 controlled release bolus)
10 days before calving
or at calving

10 days release after application

ZOOTECHNICAL BENEFITS

Daily supply over 10 days around calving of rumen-protected ingredients oriented towards liver and energy metabolism to :

- ✓ **Stimulate liver detoxification** (less ketone bodies and fatty acids) through L-carnitine and choline
- ✓ **Improve the hepatic glucose production**
- ✓ **Optimize the beginning of lactation**
- ✓ **Support reproductive parameters** (return of ovulation cycle)

PACKAGING

1 case = 12 boluses (6 cows)
